DETAILED ACTION

Oath/Declaration

1. Requirement for a new oath/declaration is withdrawn.

Priority

2. Regarding priority examiner withdraws need for declaring priority to PCT/DK03/00680.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Bennett, Jr. (US Patent No. 5012815) (Hereinafter Bennett).
5. Regarding claim 1, Bennett discloses the use of a microphone (transducer) to obtain heart sound (phonocardiographic) signal. The signal goes through spectral analysis and uses sine functions model to chart the signal in relation to a time interval for the discrete Fourier transform. The time and frequency axis scaling control the amplitudes and phases of the sinusoidal heart sound signal (column 1 lines 27-35, column 4 lines 3-12 and 16-31, column 14 lines 4-15).
6. With respect to claim 8, the heart sound signal passes through a windowing time function as well as a Fourier transform spectral analysis (column 6 lines 21-34 and 45-51). Peaks are found, classified and compared (column 12 lines 35-38, 50-54, and 65-

68). The time and frequency axis scaling control the amplitudes and phases of the sinusoidal signal (column 1 lines 27-35, column 4 lines 3-12 and 16-31, column 14 lines 4-15). The heart sound signal is enhanced by synchronizing and combing signals which removes noise creating a clear signal with respect to time (column 9 lines 62-68 column 10 lines 1-10, column 11 lines 31-39).

Claim Objections

7. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

8. Applicant's arguments filed 11/6/2007 have been fully considered but they are not persuasive. Regarding claims 1 and 8, examiner does find that Bennet discloses using analysis, classification and subsequent re-synthesis on phonocardiographic signals obtained by a transducer (column 1 lines 27-35, column 4 lines 3-12 and 16-31, column 14 lines 4-15).

Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
